Imagin Announces i/Blue Product Development Program Moves to University of Rochester Laboratory for Laser Energetics

Imagin Medical is the developer of the ultrasensitive i/Blue Imaging System that will establish a new standard of care for urologists in detecting bladder cancer through endoscopes.

Vancouver, B.C. and Boston, MA, April 12, 2016 – Imagin Medical (CSE: IME) (the “Company”) announced today that Dr. Stavros Demos, the inventor of the i/Blue Imaging System, has accepted the position of “Senior Scientist and Group Leader of the Optical Materials Group” at the University of Rochester [Laboratory for Laser Energetics \(LLE\)](#) in New York. LLE has a world class reputation for developing successful laser and optical technologies and supporting a variety of US Government missions. Going forward, Imagin Medical’s engineering team will work with LLE to continue development of its ultrasensitive cancer imaging technology.

“Being able to work with such an extraordinary pool of scientists and engineers in their state-of-the-art facility is a great opportunity for us,” said Jim Hutchens, Imagin President and CEO. “Their expertise and success with laser and optical technology applications will help drive our development program more rapidly and may result in additional intellectual property.”

LLE was established in 1970 and has become an internationally known resource for research and education in science and technology. A pioneer in university/industry collaborations, LLE employs over 300 engineers and scientists with a recognized expertise in laser, optics and the interaction of light with matter.

Imagin’s goal at University of Rochester LLE is to build on the Company’s initial prototype and continue to refine the product’s design, requalifying the system’s optical model, components and advanced light sensors, and help create the controls needed for optimized operation and patient safety. These next generation products will be used for clinical trials, regulatory submission and eventual commercial distribution.

During Imagin’s first development meeting held at LLE in Rochester, NY, Dr. Demos commented, “Working at Lawrence Livermore National Laboratory (LLNL) in California for twelve years was an invaluable experience while focusing on contributing to LLNL mission and goals. Now, at LLE, I’m joining former colleagues and collaborators, along with a world class

team of scientists and their Medical Center, that can be a great asset in the efforts to continue the development of Imagin's i/Blue Imaging System."

About Imagin Medical

Imagin Medical is developing imaging solutions for the early detection of cancer. The Company is focused on advanced medical imaging to radically improve the way physicians detect cancer through the use of endoscopes. Imagin's initial target market is bladder cancer, a major cancer worldwide, the sixth most prevalent in the U.S., and the most costly cancer to treat due to a greater than 50% recurrence rate.

This advanced, ultrasensitive imaging technology is based upon improved optical designs and advanced light sensors.
